DATA ANALYSIS, INTERPRETATION AND PRESENTATION

"Data analysis is the process of bringing order, structure and meaning to the mass of collected data It is a messy, ambiguous, time-consuming, creative, and fascinating process It does not proceed in a linear fashion; it is not neat Qualitative data analysis is a search for general statements about relationships among categories of data"

Using Data Analytics to Detect Fraud

Although testing a sample of data is a valid audit approach, it is not as effective for fraud detection purposes To detect fraud, data analysis techniques must be performed on the full data population Need to define population boundaries, including amount of historical data ...
