FURTHER TYPES OF INDEFINITE THETA FUNCTIONS AND ...

Andrews, Dyson, and Hickerson showed that the coefficients $S(n)$ satisfy striking properties; in particular, they showed that $\limsup S(n) = 1$, but at the same time $S(n) = 0$ for infinitely many n . Their proof hinged on the fact that ζ can be written as an indefinite theta series: $(1) \zeta(q) = \sum_{n \geq 0} B_n q^{n^2} \prod_{j=0}^{\infty} (1 + X^{n+j} q^{2n+j})$

In particular, both Andrews and Watson [17, 16] have provided commentary on this letter While Andrews focus is on explaining the difference between theta series, ever, it was suggested by Larry Rolen that that one might be able to rewrite F and we can write this as an integral transform via Cauchy's theorem $F(q) = \frac{1}{2\pi i} \int_Z$
